PROBLEM

Given an array of integers nums and an integer target, return indices of the two numbers such that they add up to target.
You may assume each input has exactly one solution.

EXAMPLE

Input: nums = [2,7,11,15], target = 9 Output: [0,1]
Explanation: nums[0] + nums[1] == 9

CONSTRAINTS

$2 \le$ nums.length $\le 10^4$ · Only one valid answer exists

Top Answer by AlgoMaster ▲ 39 ▼

```
def twoSum(nums, target):
    seen = {}
    for i, num in enumerate(nums):
        comp = target - num
        if comp in seen: return [seen[comp], i]
        seen[num] = i
```

Hash map approach. O(n) time, O(n) space.
