Two Sum

Easy · Coding · Array · 52% success · 2,841 attempts

Problem | Answers (2) | Discussion

PROBLEM

Given an array of integers nums and an integer target, return indices of the two numbers such that they add up to target.
You may assume each input has exactly one solution.

EXAMPLE

Input: nums = [2,7,11,15], target = 9 Output: [0,1]
Explanation: nums[0] + nums[1] == 9

CONSTRAINTS

$2 \le$ nums.length $\le 10^4$ · Only one valid answer exists
