UML Sequence Diagram 2 - Save All Data

A user saves data. The user calls SystemFacade.getInstance(), then calls
SystemFacade.saveAll(). The facade collects current questions from
QuestionList.getAll() and then delegates file persistence to DataWriter.saveUsers(),
saveQuestions(), and saveSubmissions(), returning true only if the writes succeed.

User	SystemFacade	UserList	QuestionList	DataWriter

getInstance() : SystemFacade

instance

saveAll() : boolean

getAll() : List<InterviewQuestion>

List<InterviewQuestion>

getInstance() : UserList

instance

saveUsers(users:ArrayList<Users>) boolean

true/false

saveQuestions(questions:ArrayList<InterviewQuestion>) : boolean

true/false

saveSubmissions(subs:ArrayList<QuestionSubmission>) : boolean

true/false

true if save successful
